A table

Box title here

- A 2 $\times$ 2 contingency table:

	Disease		
Exposed	No	Yes	**Total**
No	192	48	240
Yes	84	36	120
Total	276	84	360

- Bye.

Another table (with `xtable`)

Linear regression

Table 1 shows my results.

	Estimate	Std. Error	*t*-value	*p*-value
(Intercept)	96.87	7.24	13.38	0.0000
Wind	-5.55	0.69	-8.04	0.0000

Table 1: Linear regression model coefficients for wind and ozone association.

A plot in a box

A plot

I like Figure 1.

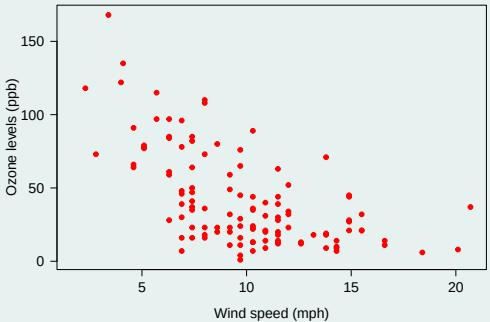

Figure 1: Scatter plot of ozone levels vs. wind speed.

Boxes in rows and columns

Box 1

Text in box 1.

Box 2

Text in box 2.

```
> x <- 2
> x + 1

## [1] 3
```

Box 3

An equation.

$$z = x + y.$$

Box 4

An equation with label for reference.

$$y = \frac{1}{2} g t^2. \tag{1}$$

Equation (1) represents the free-fall distance (y) under constant gravity (g) over time (t), starting from rest.

Plot in a box

Box *a*

Hello.

Box *b*

Different ways to cite:

- See work by Barrera-Gómez and Basagaña[1].
- This is another citation.[1]

Possible outer title for figure 2 here

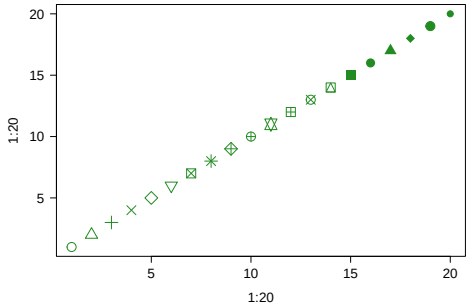

Figure 2: Different points.
